

The Enfield "Super 8" Pickup

At Enfield Guitars we understand that when it comes to a "great" bass it's all about the tone.

There is much talk about tone woods & different construction techniques but when talking electric bass there is only one place to find great tone & we believe this comes from the pickup.

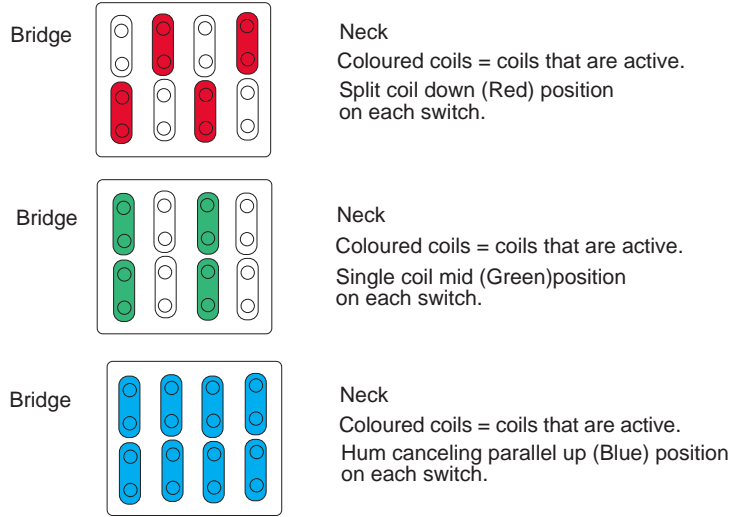

The pickup is the heart of any bass with everything else contributing to allow that tone to be heard.

That is why Enfield invented the Super 8 pickup. We at Enfield Guitars believe that the only way to get proper split coil sounds is from a split coil pickup. This is also the same with single coil & hum canceling coils as well.

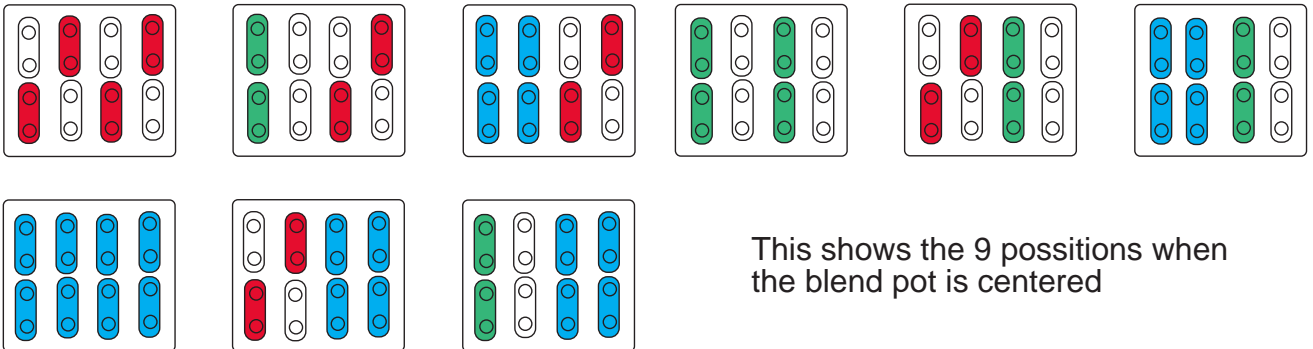

The Enfield "Super 8" is the only pickup to give the ability to switch from true Split coil to single coil to hum canceling parallel coils all in one package.

With it's simple 3 way switching & tri-colour L.E.D system this can be achieved quickly & simply with the added bonus of easy colour recognition.

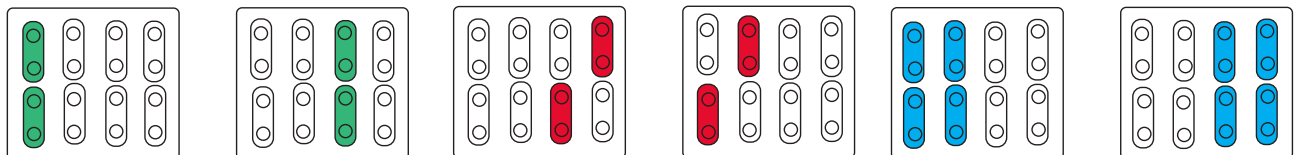

Please look at the options below to get a better idea of what is possible with this revolutionary new pickup & electronics.

Positions with centered blend pot

Positions using blend pot

This shows the 6 positions when the blend pot is all the way to the bridge or neck pickup
From here on you can use the blend pot to dial in the exact tone type to suit your needs
